PROJECT PLANNING PHASE

Electric Vehicle Market Performance and Insights

Agile Product Backlog • Sprint Planning • Story Points • Project Tracker

Project Detail	Information
Project Name	Electric Vehicle Market Performance and Insights (EV Market Train)
Project Type	Global EV market data analysis and interactive Tableau dashboard
Dataset	ev_market_train.csv (unioned EV CSV dataset, as provided by the project owner)
Tool / Platform	Tableau Desktop 2025/2026
Dashboard Theme	Dark navy with electric green highlights
Planning Date	01 November 2026
Team ID / Members	To be filled by student / project team
Maximum Marks	8 Marks

1. Product Backlog, Sprint Schedule, and Estimation (4 Marks)

The product backlog lists the work required to prepare the EV dataset, analyse the market, build visualisations, and assemble an interactive Tableau dashboard. Story points are relative effort estimates; priority indicates the order of importance.

Sprint	Functional Requirement (Epic)	Story No.	User Story / Task	Points	Priority	Team Member
Sprint 1	Data Preparation	US-01	As an analyst, I can connect the unioned ev_market_train.csv data to Tableau so that the project uses the complete dataset.	3	High	_____
Sprint 1	Data Preparation	US-02	As an analyst, I can check field names, data types, null values, and duplicate records so that the data is ready for analysis.	3	High	_____
Sprint 1	Data Preparation	US-03	As an analyst, I can create required calculated fields and suitable geographic roles so that measures and map views work correctly.	4	High	_____
Sprint 1	Data Preparation	US-04	As a viewer, I can see a documented overview of the dataset and its key measures before exploring the dashboard.	2	Medium	_____
Sprint 1	Data Preparation	US-05	As an analyst, I can validate year, price, range, and sales-related fields so that chart axes use meaningful units.	4	High	_____
Sprint 1	Data Preparation	US-06	As a project team, we can confirm the first-sprint data source and field list before building charts.	4	Medium	_____
Sprint 2	Market Overview & Trends	US-07	As a viewer, I can see key market summary measures so that I can understand the overall EV market at a glance.	4	High	_____
Sprint 2	Market Overview & Trends	US-08	As a viewer, I can explore the EV market trend by year so that I can identify changes over time.	4	High	_____

Sprint 2	Market Overview & Trends	US-09	As a viewer, I can compare EV categories / vehicle types so that I can understand their market distribution.	3	High	_____
Sprint 2	Market Overview & Trends	US-10	As a viewer, I can compare EV market performance across countries or regions using a world map where geographic fields are available.	5	High	_____
Sprint 2	Market Overview & Trends	US-11	As a viewer, I can filter the overview by available year, country, and vehicle category fields.	4	Medium	_____
Sprint 3	Vehicle & Technology Analysis	US-12	As a viewer, I can compare vehicle price and driving range using readable units and suitable chart scales.	4	High	_____
Sprint 3	Vehicle & Technology Analysis	US-13	As a viewer, I can compare battery types / specifications where present in the dataset.	3	Medium	_____
Sprint 3	Vehicle & Technology Analysis	US-14	As a viewer, I can analyse available performance, efficiency, or sustainability measures to identify useful patterns.	4	Medium	_____
Sprint 3	Vehicle & Technology Analysis	US-15	As a viewer, I can use interactive filters and tooltips to inspect individual categories and data points.	4	High	_____
Sprint 3	Vehicle & Technology Analysis	US-16	As an analyst, I can verify that chart titles, labels, units, and aggregations are consistent.	5	High	_____
Sprint 4	Dashboard & Delivery	US-17	As a viewer, I can use a single dashboard to explore the main EV market insights in one place.	5	High	_____
Sprint 4	Dashboard & Delivery	US-18	As a viewer, I can identify charts and KPIs through a consistent dark navy and electric green design.	3	Medium	_____
Sprint 4	Dashboard & Delivery	US-19	As a project evaluator, I can interact with dashboard filters and navigation to review the analysis.	4	High	_____
Sprint 4	Dashboard & Delivery	US-20	As a project owner, I can save and reopen an editable packaged Tableau workbook (.twbx) with its data source.	5	High	_____
Sprint 4	Dashboard & Delivery	US-21	As a project owner, I can validate the final workbook and prepare project findings and presentation screenshots.	3	High	_____

2. Sprint Plan and Deliverables

Sprint	Duration	Planned Start	Planned End	Planned Points	Sprint Deliverable
Sprint 1	6 days	01 Nov 2026	06 Nov 2026	20	Dataset connected, cleaned, validated; field and measure list prepared.
Sprint 2	6 days	07 Nov 2026	12 Nov 2026	20	Market overview, yearly trend, category comparison, and geographic map sheets.

Sprint 3	6 days	13 Nov 2026	18 Nov 2026	20	Price-versus-range, battery / technology, and other supported analysis sheets.
Sprint 4	6 days	19 Nov 2026	24 Nov 2026	20	Interactive dashboard, design polish, validation, and editable TWBX delivery.

Note: Dates above are a proposed schedule beginning 01 November 2026. Update them if the class or team has a different submission calendar. The dataset's exact available columns determine which optional measures can be analysed; do not create a chart for a field that is not present.

3. Project Tracker, Velocity & Burndown Chart (4 Marks)

The tracker below records planned work and provides fields for the team to enter actual completion. Actual completed points and actual release dates are intentionally left blank until the sprint work is performed.

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date	Completed Points (actual)	Release Date (actual)
Sprint 1	20	6 days	01 Nov 2026	06 Nov 2026	To be updated	To be updated
Sprint 2	20	6 days	07 Nov 2026	12 Nov 2026	To be updated	To be updated
Sprint 3	20	6 days	13 Nov 2026	18 Nov 2026	To be updated	To be updated
Sprint 4	20	6 days	19 Nov 2026	24 Nov 2026	To be updated	To be updated

4. Velocity Calculation

Assumption for planning: each sprint has 20 planned story points and lasts 6 days.

Average Velocity per Day = Story Points Completed ÷ Sprint Duration

20 ÷ 6 = 3.33 story points per day

Planned velocity is 20 story points per sprint. Actual team velocity should be calculated after each sprint using the points actually completed, not the points merely planned.

5. Burndown Chart Data (Illustrative Plan)

A burndown chart shows remaining work against time. The following is an ideal linear reference for one 6-day sprint starting with 20 points. Replace the ideal values with actual remaining work recorded by the team each day.

Time Point	Elapsed Days	Ideal Remaining Story Points
Sprint start	0	20.0
Day 1	1	16.7
Day 2	2	13.3
Day 3	3	10.0
Day 4	4	6.7
Day 5	5	3.3
Sprint end	6	0.0

To prepare the actual burndown chart, record remaining story points at the end of each working day. Plot elapsed days on the horizontal axis and remaining story points on the vertical axis. Show both the ideal remaining-work line and the actual remaining-work line.

6. Expected Project Outcome

- A validated Tableau data source based on the unioned EV market CSV dataset.
- A set of analysis worksheets for market overview, yearly trend, vehicle category, geography, and price-versus-range, subject to available fields.
- An interactive dashboard using a dark navy and electric green visual theme.

- An editable Tableau Packaged Workbook (.twbx) that opens in Tableau Desktop 2025/2026.
- A short summary of the main insights supported by the dataset.
